

McBerns Pty Ltd GM375 Odour Filter

McBerns GM375 Odour Filter

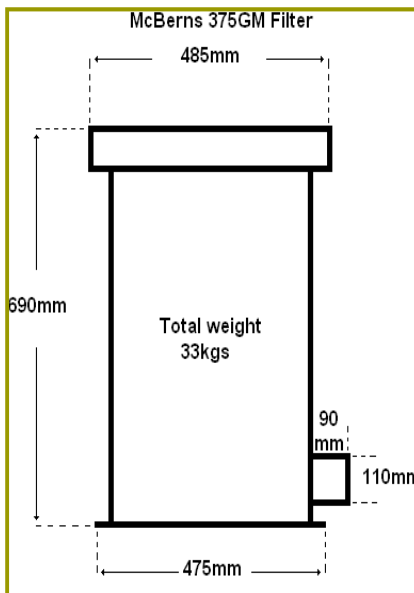

The **McBerns GM375 Odour Filter** is a larger version of the successful Ground Mount Filter GM300. Due to its larger dimensions it contains 4 times more absorbent media than the GM300.

It is designed for more extreme situations where coping with greater airflows is necessary.

There are two options for installation. It can be seated over a vent hole in a manhole or pump station cover, just like the GM300 Filter. It also has a 100mm inlet pipe to which an emission conduit can be connected. This is useful for direct connection to an air valve or an extraction fan.

McBerns Odour Filters are constructed of UV resistant PVC to last many years exposed to the elements. It's compact and aesthetically designed to blend into the surrounding environment.

MCBERNS FILTERS ARE A PROVEN FAST AND ECONOMICAL SOLUTION TO ODOUR PROBLEMS.

REPLACEMENT FILTER CARTRIDGE PACK

The media comes in 2 sections to make installation easier. The main ingredient in the media is a natural mineral which is particularly effective in adsorbing hydrogen sulphide (H_2S) molecules. There is also a small quantity of an oxidising chemical and the top layer is activated carbon.
