

# McBerns Pty Ltd Vent Odour Filters

## McBerns Sewer Vent Odour Filters

The **McBerns Odour Filters** are not a mask they absorb & treat all noxious odours and biogases including hydrogen sulfide by a continuous process, where the specially formulated media captures the sulphide gas (H<sub>2</sub>S) & other foul odours and neutralises them by changing the molecular structure. Thus only releasing clean air into the environment. The filters are designed to fit 50mm, 100mm, 150mm and 300mm sewer vent pipes and can be adapted to any pipe dimension.

The filter media consists of various grades of an absorbent natural mineral and carbon combined with a very small quantity of an oxidising chemical. Safe to handle and easily installed, replacement media cartridges are available for the VF100, VF150 and VF300 Filters. The housing is constructed of UV resistant PVC to last many years exposed to the elements and sewer conditions.

# McBerns Vent Odour Filters with Extractor Fans

## McBerns Sewer Vent Odour Filters

The **McBerns Odour Filter Range** has gone one step further making our **Vent Odour Filter** even more effective in absorbing all **foul odours including hydrogen sulfide**, by adding an Extraction Fan to the VF100, VF150 and VF300 filters.

The addition of the wind driven fan assists in the extraction of the foul odours from pump stations and surrounding buildings, sewer lines or confined spaces.

**Replacement media cartridges** are available for the VF100, VF150 and VF300 versions when the filter media reaches saturation. Safe and easy to install and recharge.

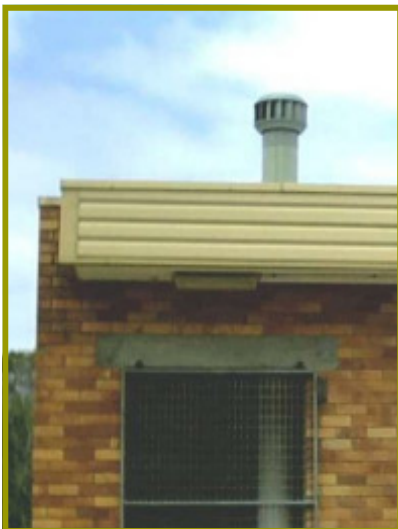

The **McBerns Odour Filters** are constructed of UV & chemical resistant PVC and the Extractor Fans are manufactured from 5005 Grade aluminum and powder coated inside & out, to withstand the harsh sewerage environment.

**Once you install our filters  
customer complaints will disappear!**

**For an Instant and Cost Effective Removal  
of noxious, corrosive & foul smelling  
gases install a McBerns Vent Filter .**
